Functions Not working correctly

1. In the front page After user logs in it still shows the user the option to sign up for the website. When clicked on this it redirects to a function call register.
2. In our Sign up page an item in the DB for user sign up which is suppose to be hidden is shown. This item is the thumb nail. This should be hidden.
3. Our website banner is being covered in part by the heading that scrolls down. The banner is partly not visible
